Fair Value of Insurance Contracts: Risk-free Rate (NTD)

NTD Risk-free Rate

Calculate 3-yr daily MA yield curve based on the zero coupon yield curve announced by OTC (Svensson) and use the extrapolation method provided by [EU Solvency II QIS 5](#) to construct the complete yield curve.

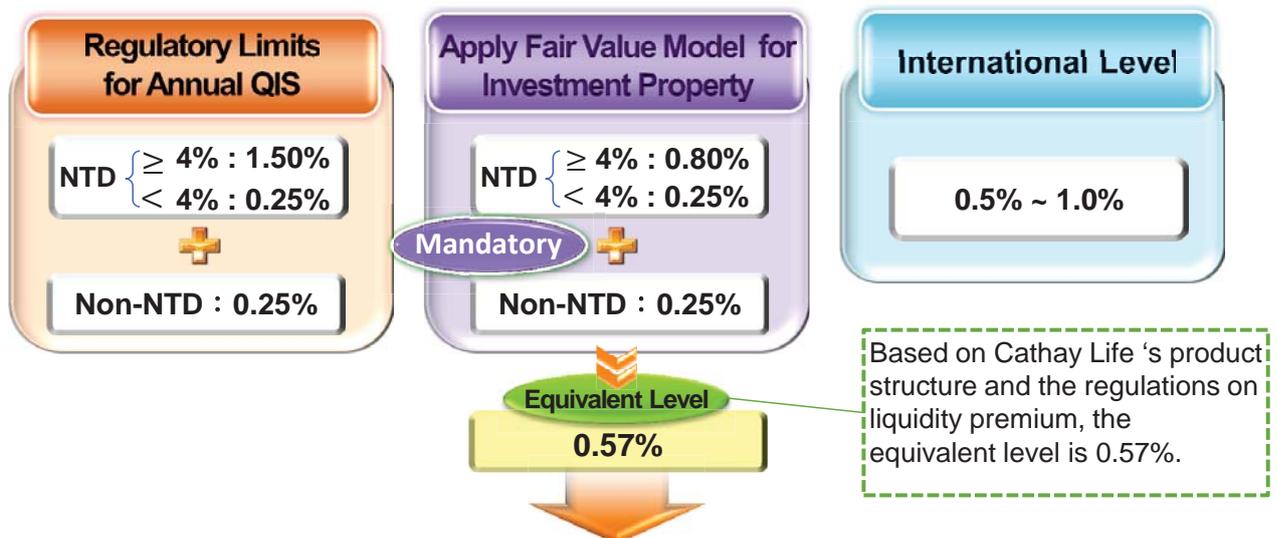

Note: The "Spot Rate" mentioned above refers to 3-yr daily MA yield curve.

55

Fair Value of Insurance Contracts: Liquidity Premium

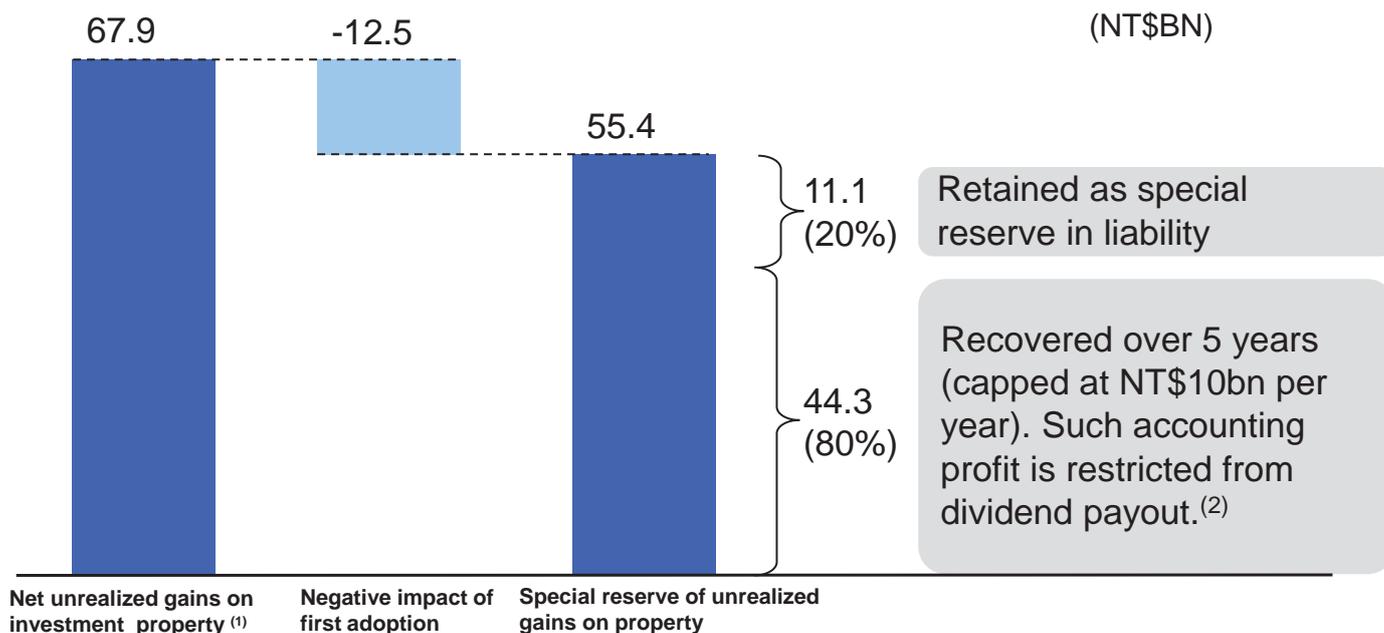

If insurers apply fair value model for investment property, their insurance liabilities should also be assessed under fair value basis. Taiwan adopts a relatively strict standard of liquidity premium compared to the international level of 0.5%~1%.

According to the regulations on liquidity premium mentioned above, Cathay Life's reserve is enough and allowed to recognize after tax full amount of investment property appraisal gain under fair value method into shareholder's equity.

56

Special reserve of unrealized gains on property

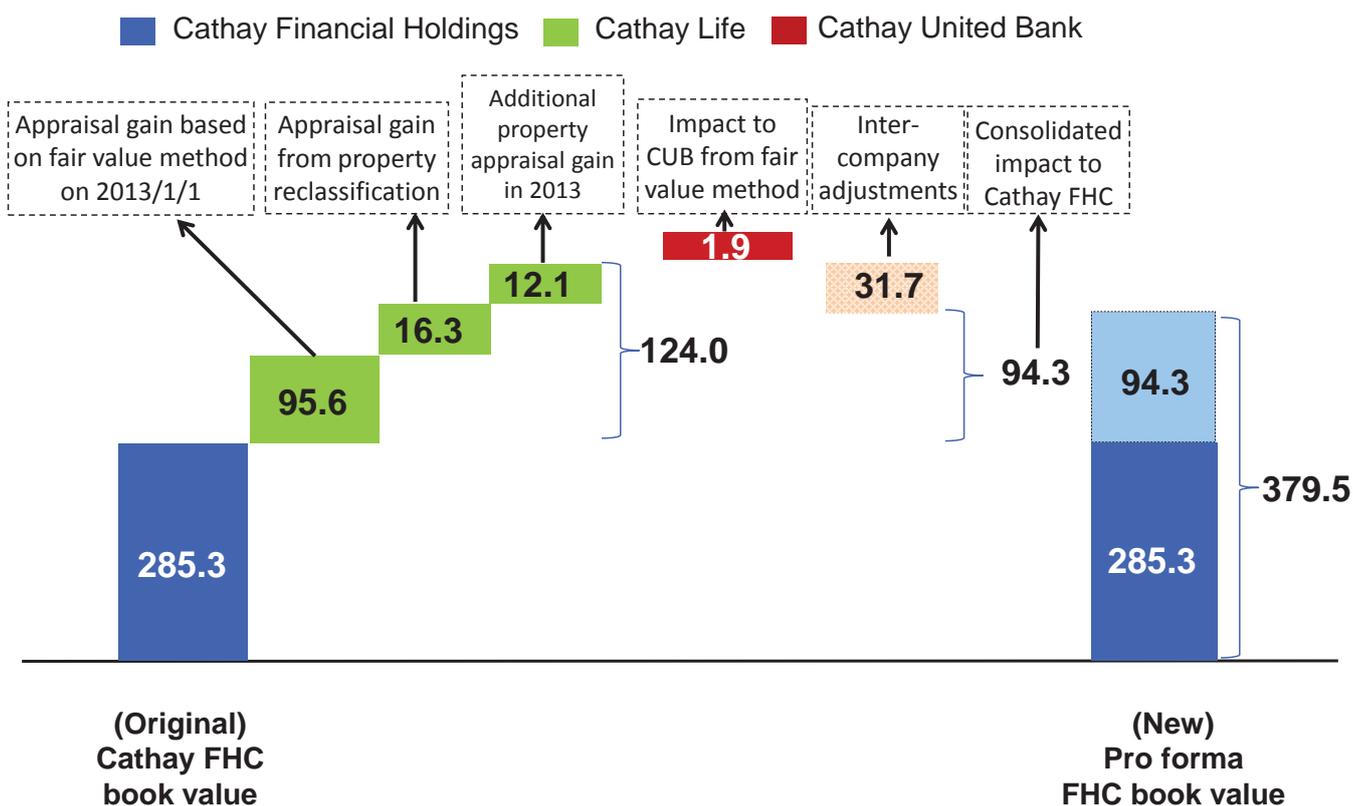

Note: (1) Net unrealized gains on investment property is calculated by discounting rental income at industry average WACC(3.29%), net of related taxes. The amount is therefore well below the property market value.

(2) The recovery of such special reserve is subject to regulatory approval each year. Hence, the actual recovery depends on the fair valuation results each year.
